

T1 — core-methylated state

vegetative growth (12 h)
active core / Compartment A (2.3–6.2 Mb)

■ Exposed regulators carry promoter m4C

| GCCGGC m4C site ■ Exposed regulator

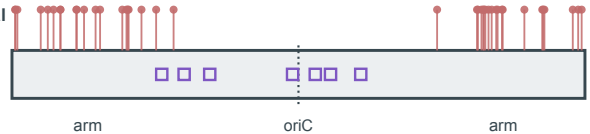

developmental
switch

synchronous
demethylation
+ core→arm
relocation

T2 — arm-redistributed state

developmental switch (24 h)
active core / Compartment A (2.3–6.2 Mb)

□ same regulators, promoters demethylated

Permissive, not instructive

The core→arm relocation mirrors the active 3D chromosomal compartment (Deng et al. 2023) but biases expression only weakly (geography-controlled $r = -0.09$, $p = 0.004$). Methylation marks which regulatory loci are spatially organised — it sets transcriptional competence, not the direction of transcription. No predictive classifier (AUC) is claimed.
