

H26: TF Binding Site-Level Methylation Protection — Comprehensive Summary

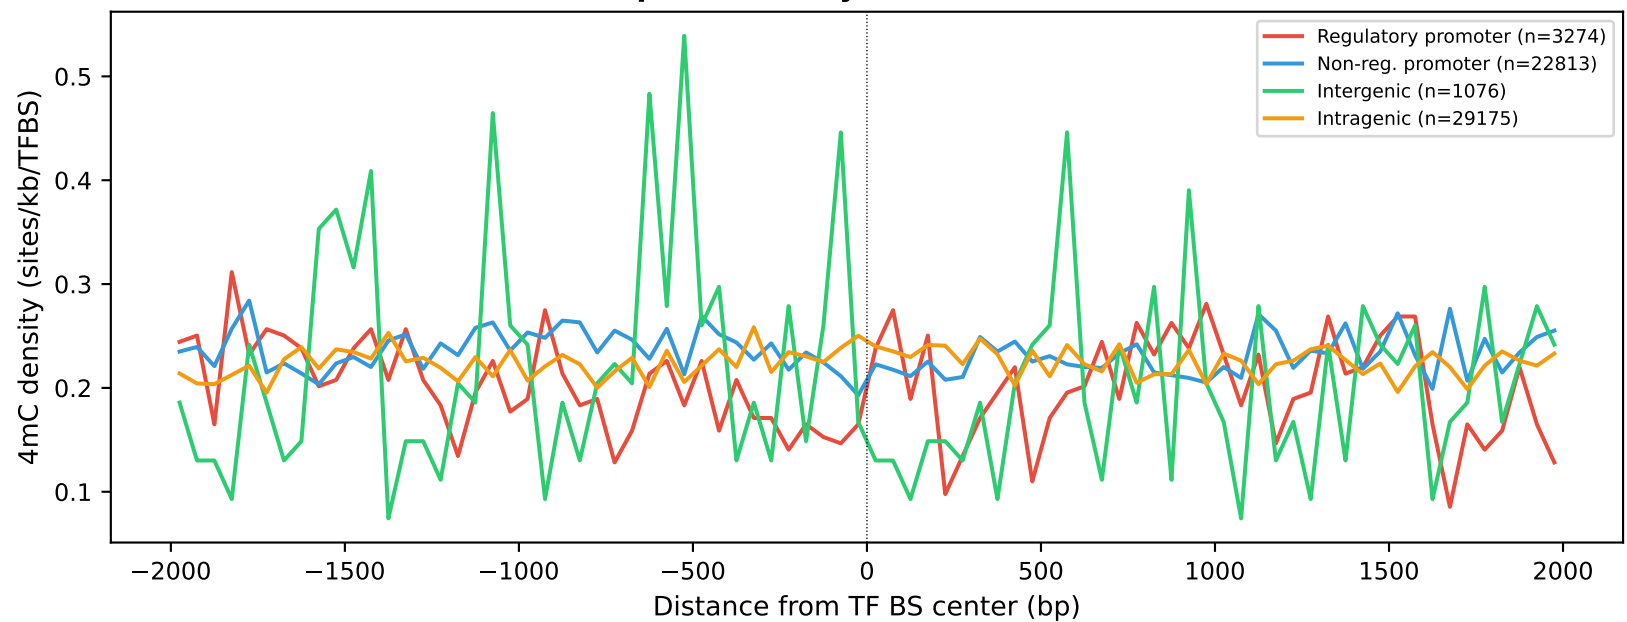

A. Spatial Methylation Profile Around TF Binding Sites (All 4mC T1)

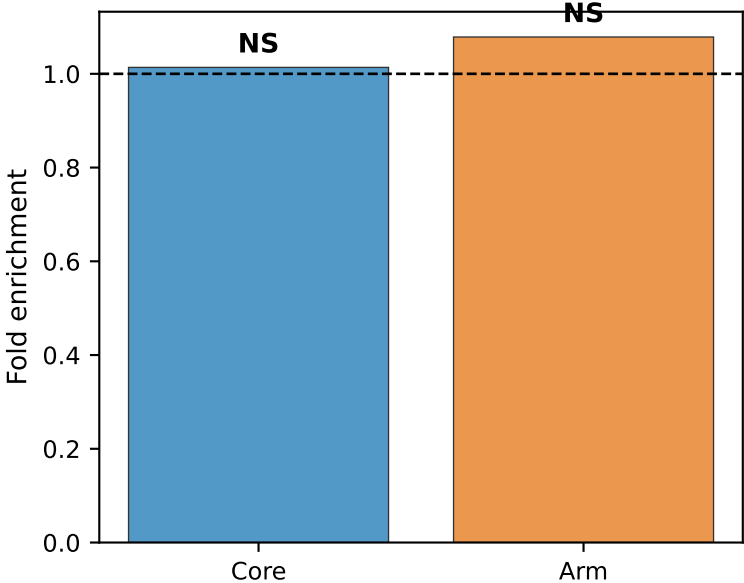

B. TF Family-Specific Methylation at BS

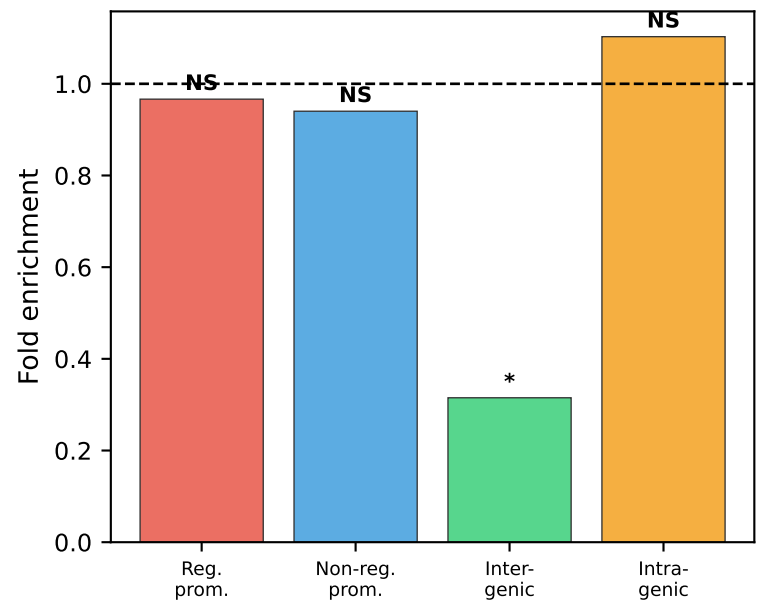

C. Context-Specific Methylation Profiles (All 4mC T1)

D. Core vs Arm (All 4mC T1)

E. Overlap by Context (All 4mC T1)

F. Comparison with H25 TSS-Level Protection

H25 (TSS-level):	H26 (TF BS-level):
Protection zone: 2,200 bp	TF BS width: 19 bp (median)
Max depletion: 17.3%	Central depletion:
	All_4mC_T1: 1.6%
	All_T1: -0.6%
Deepest at +300 bp	Overall overlap fold: 1.014
Reg. genes: 4.6x stronger	p = 7.52e-01

Interpretation:
H25 protection zone and H26 TF BS-level protection provide complementary evidence for the protein occupancy model.
