

H35: Predicted Regulatory Model for Exposed TF Two-Bloc System

Distributed Methylation-Responsive Regulatory Layer

DEVELOPMENTAL TRANSITION MODEL (T1 -> T3)

Vegetative growth programs (metabolism, DNA replication, defense) are repressed

Developmental programs (morphogenesis, TCS signaling, stress responses, BGC regulation) are activated

Confidence: H = High (multiple lines of evidence) | M = Medium (family + context) | L = Low (family alone)
